Primary Keyword Testing	Search Intent Mixed Intent
Topic Cluster Guide / Article Cluster	AI Visibility Potential 100/100
Category Guide / Article	Keyword Coverage 100%

Primary H1
A/B testing en UX design, êtes-vous sûr de faire les bons choix ?

Page Title
Qu'est-ce que l'A/B testing, AB testing ou A/B test ? Définition et usage

Meta Description
L'A/B testing est une technique pour comparer différentes variantes d'un site, d'une application ou d'une newsletter. Voilà comment procéder...

AI Insight

This page targets the keyword "Testing" with mixed intent intent. It sits in the Guide / Article Cluster topic cluster and behaves like a guide / article. Topical focus is strong, but semantic coverage is strong. The main execution gap is currently performance, so prioritizing Strengthen keyword placement for the Testing theme across title, metadata, and supporting headings. should improve both ranking resilience and business visibility.

Executive KPI Dashboard

Total Links

56

Complete internal link inventory analyzed in this report.

Working Links

53

95% of the observed link set resolves cleanly.

Broken Links

0

Broken references create avoidable crawl friction and dead ends.

Redirects

3

5% of links redirect before reaching the destination.

Health Score

95/100

Presentation score derived from current link outcomes and crawl cleanliness.

Business Impact

Medium

Business impact is currently medium, so user journeys remain mostly stable but should be protected from unnecessary redirect hops.

SEO Impact

Medium

SEO impact is medium, with crawl efficiency and internal equity flow as the core optimization themes.

Risk Level

High

Overall risk is high, driven primarily by redirect overhead rather than broken-link loss.

Crawl Health

Excellent

Crawl health is excellent with a presentation score of 95/100.

AI Executive Summary

67% of redirects originate from outdated training pages. No broken links were detected in the audited link set. Redirect chains are the primary optimization opportunity in the current crawl sample.

Top 5 Priority Recommendations	
Priority	Recommended Action
Medium	Replace redirecting URLs with their final destination to improve crawl efficiency and page speed.

Technical Findings Dashboard

AI Technical Interpretation

No broken links were detected in the audited link set. Redirect chains are the primary optimization opportunity in the current crawl sample.

Detailed Findings

Issue	Severity	Description	SEO Impact	Recommended Fix
Redirect	Medium	Redirected 1 time(s) to https://usabilis.com/formation/certificat-ergonomie-des-inter-faces-uxui-design	Redirect chains dilute crawl efficiency and add unnecessary latency.	Replace the redirected URL with its final destination to improve crawl efficiency.
Redirect	Medium	Redirected 1 time(s) to https://usabilis.com/formation/formation-ux-design-avance	Redirect chains dilute crawl efficiency and add unnecessary latency.	Replace the redirected URL with its final destination to improve crawl efficiency.
Redirect	Medium	Redirected 1 time(s) to https://usabilis.com/agence-ux	Redirect chains dilute crawl efficiency and add unnecessary latency.	Replace the redirected URL with its final destination to improve crawl efficiency.

Error Analysis

Link URL	Error Type	Explanation	Impact	Recommended Action
https://usabilis.com/formation/certification-ux-ui-design	Redirect	Redirected 1 time(s) to https://usabilis.com/formation/certificat-ergonomie-des-interfaces-uxui-design	Redirect chains dilute crawl efficiency and add unnecessary latency.	Replace the redirected URL with its final destination to improve crawl efficiency.
https://usabilis.com/formation/formation-user-experience-design-avance	Redirect	Redirected 1 time(s) to https://usabilis.com/formation/formation-ux-design-avance	Redirect chains dilute crawl efficiency and add unnecessary latency.	Replace the redirected URL with its final destination to improve crawl efficiency.
https://usabilis.com/lagence	Redirect	Redirected 1 time(s) to https://usabilis.com/agence-ux	Redirect chains dilute crawl efficiency and add unnecessary latency.	Replace the redirected URL with its final destination to improve crawl efficiency.

Recommendations Matrix

Priority	Action	SEO Impact	Business Impact
Medium	Replace redirecting URLs with their final destination to improve crawl efficiency and page speed.	Improves crawl efficiency and reduces unnecessary redirect hops.	Reduces latency and improves user experience on high-value pages.

AI Recommendations

Redirect chains are the primary optimization opportunity in the current crawl sample. Internal link architecture is healthy with 95% clean destinations. The website demonstrates excellent crawl accessibility across the analyzed internal links.

Quick Wins

- Preserve current link hygiene and continue monitoring redirect accumulation.

Medium-Term Improvements

- Replace redirecting URLs with their final destination to improve crawl efficiency and page speed.

Long-Term Strategy

- Use historical monitoring to spot trend changes in crawl health over time.

Crawl Optimization Roadmap

Phase	Crawl Optimization Roadmap	Expected Outcome
Now	Preserve current link hygiene and continue monitoring redirect accumulation.	Reduces immediate crawl friction and removes the highest-priority redirect debt.
Next	Replace redirecting URLs with their final destination to improve crawl efficiency and page speed.	Improves structural consistency across core internal navigation paths.
Later	Use historical monitoring to spot trend changes in crawl health over time.	Current SEO impact is assessed as medium, while risk is rated high.

Priority Timeline

0-7 Days

Stabilize Redirect Debt

Preserve current link hygiene and continue monitoring redirect accumulation.

30 Days

Refine Link Governance

Preserve current link hygiene and continue monitoring redirect accumulation.

60 Days

Consolidate Architecture

Replace redirecting URLs with their final destination to improve crawl efficiency and page speed.

90+ Days

Scale Monitoring

Use historical monitoring to spot trend changes in crawl health over time.
