--	---

Executive Summary

Total Links 1	Working Links 0	Broken Links 0
Redirect Links 1	Error Links 0	Status Good

SEO Impact Score

SEO Impact Low	Business Impact Medium	Priority Level Medium
--------------------------------------	--	---

Detailed Findings

Issue	Severity	Description	SEO Impact	Recommended Fix
Redirect	Medium	Redirected 2 time(s) to http://www.iana.org/help/exam	Redirect chains dilute crawl efficiency and add unnecessary latency.	Replace the redirected URL with its final destination to improve crawl efficiency.
Low Domain Diversity	Medium	Outbound references are concentrated across too few external domains.	Limited diversity reduces the strength and breadth of external trust signals.	Diversify outbound references across more authoritative and relevant domains.

Error Analysis

Link URL	Error Type	Explanation	Impact	Recommended Action
https://iana.org/domains/exa	Redirect	Redirected 2 time(s) to http://www.iana.org/help/exam	Redirect chains dilute crawl efficiency and add unnecessary latency.	Replace the redirected URL with its final destination to improve crawl efficiency.

External Links Report

Total External Links 1	Unique Domains 1	HTTPS Links 1
HTTP Links 0	Redirecting Links 1	Broken Links 0

Domain Distribution

Domain	Link Count	Status
iana.org	1	Redirecting

External Link Quality

Domain Diversity Score	Low
Trust Distribution	Not Available
Reference Quality	Highly Concentrated

Recommendations Matrix

Priority	Action	SEO Impact	Business Impact
Medium	Replace redirecting URLs with their final destination to improve crawl efficiency and page speed.	Improves crawl efficiency and reduces unnecessary redirect hops.	Reduces latency and improves user experience on high-value pages.
Medium	Diversify outbound references across more external domains to reduce reliance on a narrow source set.	Improves external trust signals and broadens topical source coverage.	Improves brand trust by distributing references across safer sources.
Low	Redistribute external citations more evenly across trusted domains instead of concentrating most links on a single source.	Strengthens outbound quality signals and reduces external link risk.	Improves reporting quality and lowers the risk of unnoticed link regressions.
